1 **SEC. 2. FINDINGS.**

2 The Congress makes the following findings:

3 (1) Many areas of undeveloped National Forest
 4 System lands, National Park System lands, and
 5 public lands administered by the Bureau of Land
 6 Management in the States of Idaho, Montana, Or-
 7 egon, Washington, and Wyoming possess out-
 8 standing natural characteristics which give them
 9 high values as wilderness, parks, and wild and scenic
 10 rivers and will, if properly preserved, be an enduring
 11 resource of wilderness, wild land areas, and biodiver-
 12 sity for the benefit of the American people.

13 (2) The Northern Rockies Bioregion contains
 14 the most diverse array of wild lands remaining south
 15 of Canada, providing sanctuary for a host of species
 16 listed as threatened or endangered under section
 17 4(c) of the Endangered Species Act of 1973 (16
 18 U.S.C. 1533(c)). These national interest public lands

1 are among the most popular wild lands in the
2 United States, embracing greater ecosystems and
3 national treasures such as the Greater Yellowstone,
4 Greater Glacier/Northern Continental Divide, Great-
5 er Hells Canyon/Wallowa, Greater Salmon/Selway,
6 and Greater Cabinet/Yaak/Selkirk ecosystems.

7 (3) The natural ecosystems in the Northern
8 Rockies Bioregion are largely dependent on National
9 Forest System lands, National Park System lands,
10 and public lands administered by the Bureau of
11 Land Management, and the ecological productivity
12 and diversity of resources these Federal public lands
13 provide. Conservation of roadless areas on these
14 public lands, which produces clean water, protects
15 native fisheries and native flora and fauna, and pro-
16 vides scenic and recreational qualities, also preserves
17 options for sustainable economics through activities
18 such as hunting, fishing, and wilderness-based recre-
19 ation.

20 (4) The headwaters of several major river sys-
21 tems, including the Columbia, Snake, Green, Mis-
22 souri and Saskatchewan Rivers, originate in the
23 Northern Rockies Bioregion, and these rivers send
24 their waters to three different oceans. These waters
25 are of tremendous economic importance to farming

1 and ranching operations, municipal water supplies,
2 and water-based recreation, including fishing and
3 boating. Protection of this world class water re-
4 source will enhance these uses, reduce costs for
5 water treatment and irrigation, and increase native
6 fish populations.

7 (5) The wildlife treasures of the Northern
8 Rockies are of international significance and contain
9 remarkably intact large mammalian fauna and rare
10 and unique plant life. Wildlife habitat fragmentation
11 due to roadbuilding, timber harvest, mining, oil and
12 gas exploration, lack of interagency cooperation, and
13 other activities has severe effects on the wildlife pop-
14 ulations (including those listed as threatened or en-
15 dangered under section 4(c) of the Endangered Spe-
16 cies Act of 1973 (16 U.S.C. 1533(c))) and their
17 habitat, the water quality, the ancient forests, and
18 the greater ecosystems of the Northern Rockies Bio-
19 region. The overemphasis on resource extraction
20 from National Forest System lands and public lands
21 administered by the Bureau of Land Management
22 has compromised ecosystem integrity and detracted
23 from economic diversification opportunities. Eco-
24 nomic instability and high unemployment in rural,

1 resource-dependent communities is a common result
2 of overexploitation of these lands.

3 (6) Continued fragmentation and development
4 of the remaining roadless and essentially roadless
5 ecosystems and biological connectors of the Northern
6 Rockies would cause a loss to the Nation of an en-
7 tire wild land region and of the only remaining areas
8 south of Canada still pristine enough to support
9 populations of caribou, gray wolves, grizzly bears,
10 anadromous fish, and numerous other rare and en-
11 dangered plant and animal life all in one intact bio-
12 region.

13 (7) Since the 1936 roadless area inventory com-
14 pleted by Bob Marshall, millions of acres of roadless
15 wild lands have been developed in the Northern
16 Rockies. Extensive fragmentation of wild lands and
17 wildlife habitat has resulted in the listing of several
18 species as threatened or endangered and reduced the
19 numbers and range of many others, including anad-
20 romous fish.

21 (8) The natural ecosystems of the Northern
22 Rockies Bioregion also serve as educational and re-
23 search centers for on-site studies in biology, geology,
24 astronomy and other sciences. The pristine nature of
25 the National Forest System lands, National Park

1 System lands, and public lands administered by the
2 Bureau of Land Management in the Northern Rock-
3 ies Bioregion helps local communities attract new
4 residents and businesses based on local quality of
5 life.

6 (9) A review of the current situation in the
7 Northern Rockies has revealed the urgent need for
8 an ecological reserve system for the Northern Rock-
9 ies Bioregion, which includes core ecosystem reserve
10 areas and biological connecting corridors necessary
11 to ensure wildlife movements and genetic inter-
12 change between the core reserve areas. Wildlife free-
13 dom of movement has always been essential to the
14 survival of wildlife species, and an increasing num-
15 ber of scientific studies have identified movement
16 corridors as a necessity for wildlife conservation in
17 a changing climate. Several foreign governments, in-
18 cluding the governments of Australia and Scotland,
19 have announced plans for corridors that would make
20 wildlife movement possible as climate pressures in-
21 crease. The concept of connective corridors for wild-
22 life movement has been endorsed by governors of
23 States in the western United States, and is now
24 widely recognized by conservation and scientific or-
25 ganizations. For example, freedom of movement for

1 wildlife is basic to the emerging new science of
2 “Movement Ecology” described in a December 2008
3 Proceedings of the National Academy of Sciences.
4 This freedom of wildlife movement was a funda-
5 mental reason for the Act’s development and intro-
6 duction, and has become an increasingly high profile
7 issue in the climate and biological sciences.

8 (10) The economic value to the Nation of most
9 of these undeveloped areas, left in their natural
10 state, greatly exceeds any potential return to the
11 Treasury of the United States from timber harvest
12 and development. If current Federal land manage-
13 ment in the Northern Rockies continues to result in
14 the development of roadless areas, the American
15 public will be using its tax dollars to fund perma-
16 nent reductions in wilderness, water quality, fish and
17 wildlife habitat, and species and biological diversity.

18 (11) Instead, this Act provides opportunities for
19 employment in outdoor trades by establishing reha-
20 bilitation zones on specific tracts of damaged Fed-
21 eral land where active restoration work will occur.
22 This Act will provide contracts for local businesses
23 and renew the intrinsic economic, social and cultural
24 benefits that result from productive land. Federal
25 land rehabilitation projects represent a direct benefit

1 to the local economy and reduce the loss to Amer-
2 ican taxpayers caused by below-cost timber sales and
3 other subsidized resource extraction.

4 (12) The congressional review of roadless areas
5 within the National Forest System, National Park
6 System, and public lands administered by the Bu-
7 reau of Land Management in the States of Idaho,
8 Montana, Oregon, Washington, and Wyoming has
9 identified areas which, on the basis of their land
10 form, ecosystem, associated fish and wildlife, eco-
11 nomic value, and location will help to fulfill the role
12 of the United States Forest Service, National Park
13 Service, and Bureau of Land Management to ensure
14 a quality National Wilderness Preservation System.
15 The review has identified other areas which may
16 have outstanding values as wild and scenic rivers.
17 The review has also identified areas which may not
18 possess outstanding wilderness attributes and should
19 not now be designated as components of the Na-
20 tional Wilderness Preservation System, but which
21 should be studied to determine their role in main-
22 taining biological diversity in the Northern Rockies.

23 (13) Many areas of National Forest System
24 lands and public lands administered by the Bureau
25 of Land Management have been damaged and their

1 productivity reduced by unwise development prac-
2 tices, which have also impaired ecosystem function
3 and biological diversity. The Island Park area adja-
4 cent to Yellowstone National Park contains large
5 clear-cut areas right up to the park boundary. Ef-
6 forts should be made to return these areas to their
7 former ecological health and native diversity. These
8 efforts should seek to ensure that vital ecosystem
9 components are restored, especially in areas where
10 wildlife travel corridors and native fish and wildlife
11 populations have been damaged or eliminated. Res-
12 toration efforts should seek to ensure and maintain
13 genetic interchange, biological diversity, and restora-
14 tion of native species diversity throughout the
15 Northern Rockies Bioregion.

16 (14) Backcountry areas of the National Park
17 System have been damaged by inappropriate man-
18 agement, despite policies that require that rec-
19 ommended wilderness be administered as wilderness.
20 An emphasis on structures and motorized equip-
21 ment, and in some instances developed
22 “backcountry” campsites, have all detracted from
23 and degraded the wilderness character of these
24 backcountry areas.

1 (15) Federal agencies entrusted with managing
2 the natural resources of the Northern Rockies Bio-
3 region operate under contradictory congressional
4 mandates, and thus are in dissension over manage-
5 ment policies which involve common resources and
6 greater ecosystems. Existing agency structures and
7 regulatory mechanisms have proven unsatisfactory
8 for responsible management of nationally important
9 ecosystems on public lands. Existing laws and regu-
10 lations have not been sufficient to establish and
11 maintain agency accountability for public resources.

12 (16) This Act does not affect private existing
13 rights.

14 **SEC. 3. PURPOSES.**

15 (a) IN GENERAL.—The purposes of this Act are—

16 (1) to designate certain National Forest System
17 lands, certain National Park System lands, and cer-
18 tain public lands administered by the Bureau of
19 Land Management in the States of Idaho, Montana,
20 Oregon, Washington, and Wyoming as components
21 of the National Wilderness Preservation System;

22 (2) to designate certain National Forest System
23 lands, public lands administered by the Bureau of
24 Land Management, and watercourses on these lands
25 in the States of Montana, Idaho, and Wyoming as

1 components of the National Wild and Scenic Rivers
2 System;

3 (3) to prioritize areas for wildland recovery to
4 help restore biological diversity and native species;
5 and

6 (4) to establish a system of biological con-
7 necting corridors between the core ecosystems in the
8 Northern Rockies Bioregion and to ecologically sig-
9 nificant wild lands to the south.

10 (b) PURPOSE OF DESIGNATIONS.—The designations
11 made by this Act are made in order to—

12 (1) promote, perpetuate, and preserve the wil-
13 derness character of the area so designated;

14 (2) protect water quality, watersheds, and wild-
15 life habitat, including that of species listed as threat-
16 ened or endangered under section 4(c) of the Endan-
17 gered Species Act of 1973 (16 U.S.C. 1533(c));

18 (3) protect the ecological integrity and con-
19 tiguity of major wild land ecosystems and their
20 interconnecting corridors identified by the United
21 States Fish and Wildlife Service, and other sources;

22 (4) protect and maintain biological and native
23 species diversity and dispersal throughout the
24 Northern Rockies Bioregion;

1 (5) promote and ensure interagency cooperation
2 in the implementation of integrated, holistic eco-
3 system management and protection of the eco-
4 systems and corridors covered by this Act based
5 upon principles from conservation biology;

6 (6) preserve scenic, historic, and cultural re-
7 sources;

8 (7) promote scientific research, primitive recre-
9 ation, solitude, physical and mental challenge, and
10 inspiration for the benefit of all of the American
11 people;

12 (8) avoid the misinvestment of scarce capital in
13 lands of marginal timber value; and

14 (9) promote ecologically and economically sus-
15 tainable management in the Northern Rockies Bio-
16 region.

17 **SEC. 4. DEFINITIONS.**

18 For purposes of this Act:

19 (1) DEVELOPMENT.—The term “development”
20 means activities that eliminate the roadless and wil-
21 derness characteristics of the land and includes ski
22 resort facilities and such activities as roadbuilding,
23 timber harvest, mining, and oil and gas drilling.

24 (2) GREATER ECOSYSTEM.—The term “greater
25 ecosystem”, when used in conjunction with the spe-

1 cific ecosystems protected under this Act, means the
2 ecological land units of sufficient scale to support
3 and maintain populations of large vertebrate species
4 and the other native plant and animal species of the
5 units. These units are comprised of lands which are
6 similar in regards to topography, climate, and plant
7 and animal species. The ecosystems in the Northern
8 Rockies are also defined in terms of the habitat of
9 wildlife indicator species listed as threatened or en-
10 dangered under section 4(c) of the Endangered Spe-
11 cies Act of 1973 (16 U.S.C. 1533(c)), including griz-
12 zly bear, gray wolf, bald eagle, and caribou, and
13 have been depicted on maps published by Federal
14 agencies.

15 (3) NORTHERN ROCKIES BIOREGION.—The
16 term “Northern Rockies Bioregion” means the por-
17 tion of the Northern Rocky Mountains in the States
18 of Montana, Idaho, Wyoming, Oregon, and Wash-
19 ington, so referred to on maps referred to in this
20 Act.

21 (4) CORRIDORS.—The term “corridors” means
22 areas that provide connectivity of habitat or poten-
23 tial habitat and that facilitate the ability of terres-
24 trial, estuarine, and freshwater fish, or wildlife to
25 move within a landscape as needed for migration,

1 gene flow, or dispersal, or in response to the impacts
2 of climate change or other impacts.

3 (5) HABITAT.—The term “habitat” means the
4 physical, chemical, and biological properties that are
5 used by fish, wildlife, or plants for growth, reproduc-
6 tion, survival, food, water, and cover, on a tract of
7 land, in a body of water, or in an area or region.

8 (6) INDIAN TRIBE.—The term “Indian tribe”
9 has the meaning given the term in section 4 of the
10 Indian Self-Determination and Education Assistance
11 Act (25 U.S.C. 450b).

12 (7) NATURAL RESOURCES.—The term “natural
13 resources” means the terrestrial, freshwater, estua-
14 rine, and marine fish, wildlife, plants, land, water,
15 habitats, and ecosystems of the United States.

16 (8) PUBLIC LAND.—The term “public land”
17 has the meaning given the term in section 103(e) of
18 the Federal Land Policy and Management Act of
19 1976 (43 U.S.C. 1702(e)).

20 (9) RESILIENCE.—The terms “resilience” and
21 “resilient” means the ability to resist or recover
22 from disturbance and preserve diversity, produc-
23 tivity, and sustainability.

24 (10) SECRETARY CONCERNED.—The term
25 “Secretary concerned” means—

1 (A) the Secretary of Agriculture, with re-
2 spect to National Forest System lands; and

3 (B) the Secretary of the Interior, with re-
4 spect to National Park System lands and public
5 land.

16 scribed in this title, in the States of Idaho, Montana, Or-
17 egon, Washington, and Wyoming are designated as wilder-
18 ness and, therefore, as components of the National Wilder-
19 ness Preservation System.

9 **TITLE II—BIOLOGICAL**
10 **CONNECTING CORRIDORS**

11 **SEC. 201. FINDINGS.**

13 (1) The most recent scientific information on

16 sponse to a changing climate, points out the critical
17 need for biological connecting corridors between the
18 larger core ecosystem areas.

19 (2) While none of the remaining major wild
20 land ecosystems of the Northern Rockies Bioregion
21 appears to be of sufficient size to perpetuate the full
22 complement of self-sustaining viable populations of
23 native wildlife, biological diversity, and full range of
24 ecological processes on its own, it appears that an
25 effective reserve system can be achieved if biological

1 connecting corridors between the ecosystems are
2 identified and protected.

3 (3) The wild land areas addressed by this title
4 are located between the major core ecosystems of the
5 region and are essential for wildlife and plant migra-
6 tion and genetic interchange.

7 (4) These areas are some of the most beautiful
8 and wild mountain ranges in the United States, in-
9 cluding the Bitterroot, Sapphire, Lost River, Lemhi,

10 **SEC. 502. INTERAGENCY TEAM.**

11 (a) ESTABLISHMENT.—The Secretary of Agriculture
12 and the Secretary of the Interior shall jointly establish an
13 interagency team, containing equal numbers of partici-
14 pants from the public and private sectors, to monitor,
15 evaluate, and make recommendations to ensure long-term
16 results required by this Act.

17 (b) GEOGRAPHIC INFORMATION SYSTEM.—

18 (1) DEVELOPMENT.—The interagency team
19 shall develop a geographic information system for
20 monitoring the Northern Rockies Bioregion. The ge-
21 ographic information system shall be based on sat-
22 ellite-gathered data and shall include comprehensive
23 maps and databases to assist in the detection of
24 changes in the Northern Rockies Bioregion.

1 (2) TYPES OF INFORMATION.—The maps and
2 databases included in the geographic information
3 system shall be updated periodically to record the
4 following:

5 (A) Vegetation cover (with species occur-
6 rence and densities).

7 (B) Human impacts.

8 (C) Water and air quality.

9 (D) Activities that bear on forest hus-
10 bandry and restoration.

11 (3) STATUS REPORTS.—The geographic infor-
12 mation system shall include status reports on the
13 progress of ecosystem protection, corridor consolida-
14 tion, and forest recovery efforts and reports on the
15 status of threatened and endangered species which
16 are primary indicators of ecosystem health.

17 (c) WILDLIFE MOVEMENTS.—The interagency team
18 shall assess the potential for facilitating wildlife move-
19 ments across or under major highways and rail lines with-

23 such crossing points as movement corridors, including
24 underpasses, overpasses, and other methods for reducing

2 within the Northern Rockies Bioregion.

3 **SEC. 503. ROADLESS LANDS EVALUATION.**

4 (a) EVALUATION REQUIRED.—Roadless lands great-

8 that are not designated as components of the National
9 Wilderness Preservation System (under this Act or any
10 other law) shall be identified and evaluated by the panel
11 of independent scientists appointed under section 501. In
12 identifying and evaluating these lands, the panel shall
13 make use of existing satellite information and Geographic
14 Information System data developed by the Forest Service,
15 the Bureau of Land Management, and the United States
16 Fish and Wildlife Service, in addition to other information
17 sources. The panel shall study the role of such lands in
18 maintaining biological diversity in the Northern Rockies
19 and as part of the overall forest reserve system. The panel
20 shall make recommendations regarding the management
21 of the lands, and shall include the recommendations in the
22 report required by section 501.
