FIRST REGULAR SESSION SENATE COMMITTEE SUBSTITUTE FOR

SENATE BILL NO. 190

99TH GENERAL ASSEMBLY

Reported from the Committee on Commerce, Consumer Protection, Energy and the Environment, February 16, 2017, with recommendation that the Senate Committee Substitute do pass.

0512S.05C

ADRIANE D. CROUSE, Secretary.

AN ACT

To repeal sections 386.266, 386.390, 393.1025, 393.1030, and 393.1075, RSMo, and to enact in lieu thereof fourteen new sections relating to ratemaking for public utilities, with an existing penalty provision.

Be it enacted by the General Assembly of the State of Missouri, as follows:

Section A. Sections 386.266, 386.390, 393.1025, 393.1030, and 393.1075,

- 2 RSMo, are repealed and fourteen new sections enacted in lieu thereof, to be
- 3 known as sections 386.266, 386.390, 393.1025, 393.1030, 393.1075, 393.1100,
- 4 393.1275, 393.1400, 393.1410, 393.1600, 393.1610, 393.1640, 393.1650, and
- 5 393.1660, to read as follows:
 - 386.266. 1. (1) Subject to the requirements of this section, any electrical
- 2 corporation may make an application to the commission to approve rate schedules
- 3 authorizing an interim energy charge, or periodic rate adjustments outside of
- 4 general rate proceedings to reflect increases and decreases in its prudently
- 5 incurred fuel and purchased-power costs, including transportation. Such rate
- 6 schedules shall also include and provide for adjustments reflecting all
- 7 prudently incurred transmission charges not included in the costs
- 8 covered by the immediately preceding sentence, and all transmission
- 9 revenues, paid to or received from any transmission service
- 10 **provider.** The commission may, in accordance with existing law, include in such
- 11 rate schedules features designed to provide the electrical corporation with
- 12 incentives to improve the efficiency and cost-effectiveness of its fuel and
- 13 purchased-power procurement activities.
- 14 (2) Electrical corporations may file with the commission to

amend existing rate schedules that provide for recovery of fuel and purchased-power costs, including transportation, and may do so without the necessity of filing a general rate proceeding, with such amended rate schedules to include transmission charges and revenues as provided for in subdivision (1) of this subsection. Transmission charges and revenues paid to or received from any transmission service provider on or after the effective date of subdivision (1) of this subsection, to the extent they are not already reflected in base rates, shall be recovered beginning when the first rate adjustment is made that covers the accounting period that coincides with the effective date of subdivision (1) of this subsection.

- 2. Subject to the requirements of this section, any electrical, gas, or water corporation may make an application to the commission to approve rate schedules authorizing periodic rate adjustments outside of general rate proceedings to reflect increases and decreases in its prudently incurred costs, whether capital or expense, to comply with any federal, state, or local environmental law, regulation, or rule. Any rate adjustment made under such rate schedules shall not exceed an annual amount equal to two and one-half percent of the electrical, gas, or water corporation's Missouri gross jurisdictional revenues, excluding gross receipts tax, sales tax and other similar pass-through taxes not included in tariffed rates, for regulated services as established in the utility's most recent general rate case or complaint proceeding. In addition to the rate adjustment, the electrical, gas, or water corporation shall be permitted to collect any applicable gross receipts tax, sales tax, or other similar pass-through taxes, and such taxes shall not be counted against the two and one-half percent rate adjustment cap. Any costs not recovered as a result of the annual two and one-half percent limitation on rate adjustments may be deferred, at a carrying cost each month equal to the utilities net of tax cost of capital, for recovery in a subsequent year or in the corporation's next general rate case or complaint proceeding.
- 3. Subject to the requirements of this section, any gas corporation may make an application to the commission to approve rate schedules authorizing periodic rate adjustments outside of general rate proceedings to reflect the nongas revenue effects of increases or decreases in residential and commercial customer usage due to variations in either weather, conservation, or both.
- 49 4. The commission shall have the power to approve, modify, or reject adjustment mechanisms submitted under subsections 1 to 3 of this section only

73

75

76

77

after providing the opportunity for a full hearing in a general rate proceeding, including a general rate proceeding initiated by complaint. The commission may approve such rate schedules after considering all relevant factors which may

54 affect the costs or overall rates and charges of the corporation, provided that it

- 55 finds that the adjustment mechanism set forth in the schedules:
- 56 (1) Is reasonably designed to provide the utility with a sufficient 57 opportunity to earn a fair return on equity;
- 58 (2) Includes provisions for an annual true-up which shall accurately and 59 appropriately remedy any over- or under-collections, including interest at the 60 utility's short-term borrowing rate, through subsequent rate adjustments or 61 refunds;
- 62 (3) In the case of an adjustment mechanism submitted under subsections 63 1 and 2 of this section, includes provisions requiring that the utility file a general rate case with the effective date of new rates to be no later than four years after 64 65 the effective date of the commission order implementing the adjustment mechanism. However, with respect to each mechanism, the four-year period shall 66 67 not include any periods in which the utility is prohibited from collecting any charges under the adjustment mechanism, or any period for which charges 68 69 collected under the adjustment mechanism must be fully refunded. In the event a court determines that the adjustment mechanism is unlawful and all moneys 70 71 collected thereunder are fully refunded, the utility shall be relieved of any 72obligation under that adjustment mechanism to file a rate case;
 - (4) In the case of an adjustment mechanism submitted under subsection 1 or 2 of this section, includes provisions for prudence reviews of the costs subject to the adjustment mechanism no less frequently than at eighteen-month intervals, and shall require refund of any imprudently incurred costs plus interest at the utility's short-term borrowing rate.
- 5. Once such an adjustment mechanism is approved by the commission under this section, it shall remain in effect until such time as the commission authorizes the modification, extension, or discontinuance of the mechanism in a general rate case or complaint proceeding.
- 6. Any amounts charged under any adjustment mechanism approved by the commission under this section shall be separately disclosed on each customer bill.
- 7. The commission may take into account any change in business risk to the corporation resulting from implementation of the adjustment mechanism in

101

102

103

- 87 setting the corporation's allowed return in any rate proceeding, in addition to any 88 other changes in business risk experienced by the corporation.
- 8. In the event the commission lawfully approves an incentive- or 89 performance-based plan, such plan shall be binding on the commission for the 90 91 entire term of the plan. This subsection shall not be construed to authorize or prohibit any incentive- or performance-based plan. 92
- 93 9. Prior to August 28, 2005, the commission shall have the authority to 94 promulgate rules under the provisions of chapter 536 as it deems necessary, to 95 govern the structure, content and operation of such rate adjustments, and the procedure for the submission, frequency, examination, hearing and approval of 96 97 such rate adjustments. Such rules shall be promulgated no later than one hundred fifty days after the initiation of such rulemaking proceeding. Any 99 electrical, gas, or water corporation may apply for any adjustment mechanism 100 under this section whether or not the commission has promulgated any such rules.
 - 10. Nothing contained in this section shall be construed as affecting any existing adjustment mechanism, rate schedule, tariff, incentive plan, or other ratemaking mechanism currently approved and in effect.
- 105 11. Each of the provisions of this section is severable. In the event any 106 provision or subsection of this section is deemed unlawful, all remaining 107 provisions shall remain in effect.
- 108 12. The provisions of this section shall take effect on January 1, 2006, and 109 the commission shall have previously promulgated rules to implement the 110 application process for any rate adjustment mechanism under this section prior 111 to the commission issuing an order for any rate adjustment.
- 112 13. The public service commission shall appoint a task force, consisting of all interested parties, to study and make recommendations on the cost recovery 113 and implementation of conservation and weatherization programs for electrical 114 and gas corporations. 115
 - 386.390. 1. Complaint may be made by the commission of its own motion, or by the public counsel or any corporation or person, chamber of commerce, board of trade, or any civic, commercial, mercantile, traffic, agricultural or manufacturing association or organization, or any body politic or municipal corporation, by petition or complaint in writing, setting forth any act or thing done or omitted to be done by any corporation, person or public utility[, including any rule, regulation or charge heretofore established or fixed by or for any

corporation, person or public utility, in violation, or claimed to be in violation, of any provision of law subject to the commission's authority, [or] of any rule promulgated by the commission, or of any utility tariff, or order or 10 decision of the commission; provided, that no complaint shall be entertained by 11 the commission, except upon its own motion, as to the reasonableness of any rates 12 or charges of any gas, electrical, water, sewer, or telephone corporation, unless 13 the same be signed by the public counsel or the mayor or the president or 14 chairman of the board of aldermen or a majority of the council, commission or 15 other legislative body of any city, town, village or county, within which the 16 17 alleged violation occurred, or not less than twenty-five consumers or purchasers, 18 or prospective consumers or purchasers, of such gas, electricity, water, sewer or 19 telephone service.

5

- 2. All matters upon which complaint may be founded may be joined in one hearing, and no motion shall be entertained against a complaint for misjoinder of causes of action or grievances or misjoinder or nonjoinder of parties; and in any review by the courts of orders or decisions of the commission the same rule shall apply with regard to the joinder of causes and parties as herein provided.
- 3. The commission shall not be required to dismiss any complaint because of the absence of direct damage to the complainant. Upon the filing of a complaint, the commission shall cause a copy thereof to be served upon the public utility, corporation or person complained of.
- 4. Service in all hearings, investigations and proceedings pending before the commission may be made upon any person upon whom summons may be served in accordance with the provisions of the code of civil procedure of this state, and may be made personally or by mailing in a sealed envelope with postage prepaid.
- 5. The commission shall fix the time when and the place where a hearing will be had upon the complaint and shall serve notice thereof, not less than ten days before the time set for such hearing, unless the commission shall find that the public necessity requires that such hearing be held at an earlier date.

393.1025. As used in sections 393.1020 to 393.1030, the following terms

2 mean:

20

2324

25

26

27

28

29

30

31 32

3334

35

- 3 (1) "Commission", the public service commission;
- 4 (2) "Department", the department of natural resources;
- 5 (3) "Electric utility", any electrical corporation as defined by section 6 386.020;

6

- 7 (4) "Renewable energy credit" or "REC", a tradeable certificate of proof 8 that one megawatt-hour of electricity has been generated from renewable energy 9 sources; and
- 10 (5) "Renewable energy resources", electric energy produced from wind, solar thermal sources, photovoltaic cells and panels, dedicated crops grown for 11 12 energy production, cellulosic agricultural residues, plant residues, processed 13 solid biomass engineered fiber fuel as defined in section 393.1600, methane from landfills, from agricultural operations, or from wastewater 14 treatment, thermal depolymerization or pyrolysis for converting waste material 15 to energy, clean and untreated wood such as pallets, hydropower (not including 16 17 pumped storage) that does not require a new diversion or impoundment of water 18 and that has a nameplate rating of ten megawatts or less, fuel cells using 19 hydrogen produced by one of the above-named renewable energy sources, and 20 other sources of energy not including nuclear that become available after 21November 4, 2008, and are certified as renewable by rule by the department.
- 393.1030. 1. The commission shall, in consultation with the department, prescribe by rule a portfolio requirement for all electric utilities to generate or purchase electricity generated from renewable energy resources. Such portfolio requirement shall provide that electricity from renewable energy resources shall constitute the following portions of each electric utility's sales:
 - (1) No less than two percent for calendar years 2011 through 2013;
- 7 (2) No less than five percent for calendar years 2014 through 2017;
 - (3) No less than ten percent for calendar years 2018 through 2020; and
- 9 (4) No less than fifteen percent in each calendar year beginning in 2021.
- At least two percent of each portfolio requirement shall be derived from solar 10 energy. The portfolio requirements shall apply to all power sold to Missouri 11 12 consumers whether such power is self-generated or purchased from another 13 source in or outside of this state. A utility may comply with the standard in whole or in part by purchasing RECs. Each kilowatt-hour of eligible energy 14 generated in Missouri shall count as 1.25 kilowatt-hours for purposes of 15 compliance. Each kilowatt-hour of eligible energy generated from 16 17 processed solid biomass engineered fiber fuel, as defined in section 18 393.1600, shall count as 1.50 kilowatt-hours for purposes of compliance.
- 2. The commission, in consultation with the department and within one year of November 4, 2008, shall select a program for tracking and verifying the trading of renewable energy credits. An unused credit may exist for up to three

years from the date of its creation. A credit may be used only once to comply with sections 393.1020 to 393.1030 and may not also be used to satisfy any similar nonfederal requirement. An electric utility may not use a credit derived from a green pricing program. Certificates from net-metered sources shall initially be owned by the customer-generator. The commission, except where the department is specified, shall make whatever rules are necessary to enforce the renewable energy standard. Such rules shall include:

- (1) A maximum average retail rate increase of one percent determined by estimating and comparing the electric utility's cost of compliance with least-cost renewable generation and the cost of continuing to generate or purchase electricity from entirely nonrenewable sources, taking into proper account future environmental regulatory risk including the risk of greenhouse gas regulation. Notwithstanding the foregoing, until June 30, 2020, if the maximum average retail rate increase would be less than or equal to one percent if an electric utility's investment in solar-related projects initiated, owned or operated by the electric utility is ignored for purposes of calculating the increase, then additional solar rebates shall be paid and included in rates in an amount up to the amount that would produce a retail rate increase equal to the difference between a one percent retail rate increase and the retail rate increase calculated when ignoring an electric utility's investment in solar-related projects initiated, owned, or operated by the electric utility. Notwithstanding any provision to the contrary in this section, even if the payment of additional solar rebates will produce a maximum average retail rate increase of greater than one percent when an electric utility's investment in solar-related projects initiated, owned or operated by the electric utility are included in the calculation, the additional solar rebate costs shall be included in the prudently incurred costs to be recovered as contemplated by subdivision (4) of this subsection;
- (2) Penalties of at least twice the average market value of renewable energy credits for the compliance period for failure to meet the targets of subsection 1 of this section. An electric utility will be excused if it proves to the commission that failure was due to events beyond its reasonable control that could not have been reasonably mitigated, or that the maximum average retail rate increase has been reached. Penalties shall not be recovered from customers. Amounts forfeited under this section shall be remitted to the department to purchase renewable energy credits needed for compliance. Any excess forfeited revenues shall be used by the department's energy center solely

- 58 for renewable energy and energy efficiency projects;
- 59 (3) Provisions for an annual report to be filed by each electric utility in 60 a format sufficient to document its progress in meeting the targets;
- 61 (4) Provision for recovery outside the context of a regular rate case of 62 prudently incurred costs and the pass-through of benefits to customers of any 63 savings achieved by an electrical corporation in meeting the requirements of this 64 section.
- 65 3. As provided for in this section, except for those electrical corporations 66 that qualify for an exemption under section 393.1050, each electric utility shall 67 make available to its retail customers a solar rebate for new or expanded solar electric systems sited on customers' premises, up to a maximum of twenty-five 69 kilowatts per system, measured in direct current that were confirmed by the 70 electric utility to have become operational in compliance with the provisions of section 386.890. The solar rebates shall be two dollars per watt for systems 7172becoming operational on or before June 30, 2014; one dollar and fifty cents per watt for systems becoming operational between July 1, 2014, and June 30, 2015; 7374one dollar per watt for systems becoming operational between July 1, 2015, and June 30, 2016; fifty cents per watt for systems becoming operational between July 75 1, 2016, and June 30, 2017; fifty cents per watt for systems becoming operational 76 between July 1, 2017, and June 30, 2019; twenty-five cents per watt for systems 77 78becoming operational between July 1, 2019, and June 30, 2020; and zero cents per watt for systems becoming operational after June 30, 2020. An electric utility 79 80 may, through its tariffs, require applications for rebates to be submitted up to one 81 hundred eighty-two days prior to the June thirtieth operational date. Nothing in this section shall prevent an electrical corporation from offering rebates after July 82 1, 2020, through an approved tariff. If the electric utility determines the 83 maximum average retail rate increase provided for in subdivision (1) of subsection 84 2 of this section will be reached in any calendar year, the electric utility shall be 85 entitled to cease paying rebates to the extent necessary to avoid exceeding the 86 maximum average retail rate increase if the electrical corporation files with the 87 commission to suspend its rebate tariff for the remainder of that calendar year 88 89 at least sixty days prior to the change taking effect. The filing with the 90 commission to suspend the electrical corporation's rebate tariff shall include the 91 calculation reflecting that the maximum average retail rate increase will be 92 reached and supporting documentation reflecting that the maximum average retail rate increase will be reached. The commission shall rule on the suspension

filing within sixty days of the date it is filed. If the commission determines that the maximum average retail rate increase will be reached, the commission shall approve the tariff suspension. The electric utility shall continue to process and pay applicable solar rebates until a final commission ruling; however, if the continued payment causes the electric utility to pay rebates that cause it to exceed the maximum average retail rate increase, the expenditures shall be considered prudently incurred costs as contemplated by subdivision (4) of subsection 2 of this section and shall be recoverable as such by the electric utility. As a condition of receiving a rebate, customers shall transfer to the electric utility all right, title, and interest in and to the renewable energy credits associated with the new or expanded solar electric system that qualified the customer for the solar rebate for a period of ten years from the date the electric utility confirmed that the solar electric system was installed and operational.

- 4. The department shall, in consultation with the commission, establish by rule a certification process for electricity generated from renewable resources and used to fulfill the requirements of subsection 1 of this section. Certification criteria for renewable energy generation shall be determined by factors that include fuel type, technology, and the environmental impacts of the generating facility. Renewable energy facilities shall not cause undue adverse air, water, or land use impacts, including impacts associated with the gathering of generation feedstocks. If any amount of fossil fuel is used with renewable energy resources, only the portion of electrical output attributable to renewable energy resources shall be used to fulfill the portfolio requirements.
- 5. In carrying out the provisions of this section, the commission and the department shall include methane generated from the anaerobic digestion of farm animal waste and thermal depolymerization or pyrolysis for converting waste material to energy as renewable energy resources for purposes of this section.
- 6. The commission shall have the authority to promulgate rules for the implementation of this section, but only to the extent such rules are consistent with, and do not delay the implementation of, the provisions of this section. Any rule or portion of a rule, as that term is defined in section 536.010, that is created under the authority delegated in this section shall become effective only if it complies with and is subject to all of the provisions of chapter 536 and, if applicable, section 536.028. This section and chapter 536 are nonseverable and if any of the powers vested with the general assembly pursuant to chapter 536 to review, to delay the effective date, or to disapprove and annul a rule are

3

130 subsequently held unconstitutional, then the grant of rulemaking authority and

- 131 any rule proposed or adopted after August 28, 2013, shall be invalid and void.
 - 393.1075. 1. This section shall be known as the "Missouri Energy 2 Efficiency Investment Act".
 - 2. As used in this section, the following terms shall mean:
 - 4 (1) "Commission", the Missouri public service commission;
 - 5 (2) "Demand response", measures that decrease peak demand or shift 6 demand to off-peak periods;
- (3) "Demand-side program", any program conducted by the utility to modify the net consumption of electricity on the retail customer's side of the electric meter, including but not limited to energy efficiency measures, load management, demand response, and interruptible or curtailable load, and the utilization of combined heat and power technology to generate electricity from waste heat and assist customers with reducing the amount of electricity delivered by such electrical corporation, notwithstanding that such utilization may not modify consumption of energy on the customer's side of the meter;
- 16 (4) "Electrical corporation", the same as defined in section 17 386.020, but shall not include an electrical corporation regulated under 18 chapters 386 and 393 but not subject to the commission's jurisdiction 19 over its rates, financing, accounting, or management under subsection 20 2 of section 393.110;
- 21 (5) "Energy efficiency", measures that reduce the amount of electricity 22 required to achieve a given end use;
- [(5)] (6) "Interruptible or curtailable rate", a rate under which a customer receives a reduced charge in exchange for agreeing to allow the utility to withdraw the supply of electricity under certain specified conditions;
- [(6)] (7) "Total resource cost test", a test that compares the sum of avoided utility costs and avoided probable environmental compliance costs to the sum of all incremental costs of end-use measures that are implemented due to the program, as defined by the commission in rules.
- 3. It shall be the policy of the state to value demand-side investments equal to traditional investments in supply and delivery infrastructure and allow recovery of all reasonable and prudent costs of delivering cost-effective demand-side programs. In support of this policy, the commission shall:
- 34 (1) Provide timely cost recovery for utilities:

38

39

66

67

68

35 (2) Ensure that utility financial incentives are aligned with helping 36 customers use energy more efficiently and in a manner that sustains or enhances 37 utility customers' incentives to use energy more efficiently; and

- (3) Provide timely earnings opportunities associated with cost-effective measurable and verifiable efficiency savings.
- 40 4. The commission shall permit electric corporations to implement commission-approved demand-side programs proposed pursuant to this section 41 with a goal of achieving all cost-effective demand-side savings. Recovery for such 42 43 programs shall not be permitted unless the programs are approved by the 44 commission, result in energy or demand savings and are beneficial to all 45 customers in the customer class in which the programs are proposed, regardless of whether the programs are utilized by all customers. The commission shall 46 47 consider the total resource cost test a preferred cost-effectiveness test. Programs targeted to low-income customers or general education campaigns do not need to 48 49 meet a cost-effectiveness test, so long as the commission determines that the program or campaign is in the public interest. Nothing herein shall preclude the 50 51 approval of demand-side programs that do not meet the test if the costs of the program above the level determined to be cost-effective are funded by the 52 53 customers participating in the program or through tax or other governmental credits or incentives specifically designed for that purpose. 54
- 55 5. To comply with this section the commission may develop cost recovery 56 mechanisms to further encourage investments in demand-side programs including, in combination and without limitation: capitalization of investments 57 58 in and expenditures for demand-side programs, rate design modifications, 59 accelerated depreciation on demand-side investments, and allowing the utility to retain a portion of the net benefits of a demand-side program for its shareholders. 60 In setting rates the commission shall fairly apportion the costs and benefits of 61 62 demand-side programs to each customer class except as provided for in subsection 6 of this section. Prior to approving a rate design modification associated with demand-side cost recovery, the commission shall conclude a docket studying the 64 effects thereof and promulgate an appropriate rule. 65
 - 6. The commission may reduce or exempt allocation of demand-side expenditures to low-income classes, as defined in an appropriate rate proceeding, as a subclass of residential service.
- 7. [Provided that the customer has notified the electric] A customer meeting the criteria specified in this subsection may notify an

83

- electrical corporation in writing that the customer elects not to participate in 72 demand-side measures offered by [an] the electrical corporation as to some or all of the customer's electric service accounts. Starting with the first day of the billing cycle month occurring after such notification is given, 74[none of the costs of] charges arising from demand-side measures of [an 75electric the electrical corporation offered under this section or by any other 76 authority[, and no other charges implemented in accordance with this section,] 77shall not be [assigned to any account of any customer] included on the bill for 78any account of the customer specified in such notice, including any bill 79 for such an account issued to its affiliates and subsidiaries[, meeting]. To 80 be eligible to give the notice provided for in this subsection, the 81 82 **customer shall meet** one or more of the following criteria:
 - (1) The customer has one or more accounts within the service territory of the electrical corporation that has a demand of five thousand kilowatts or more;
- (2) The customer operates an interstate pipeline pumping station, regardless of size; or 86
 - (3) The customer has accounts within the service territory of the electrical corporation that have, in aggregate, a demand of two thousand five hundred kilowatts or more, and the customer has a comprehensive demand-side or energy efficiency program and can demonstrate an achievement of savings at least equal to those expected from utility-provided programs.
 - 8. Eligible customers that have [notified] provided notice under subsection 7 of this section to the electrical corporation that they do not wish to participate in demand-side programs under this section as to some, or all, of their electric service accounts shall not subsequently be eligible to participate in demand-side programs [except under guidelines established by the commission in rulemaking for the specified accounts unless the customer provides an additional notice, in writing, rescinding its previous notice as to some or all of the customer's accounts.
- 100 9. Customers who participate in demand-side programs initiated after 101 August 1, 2009, shall be required to participate in program funding for a period 102 of time to be established by the commission in rulemaking.
- 103 10. Customers electing not to participate in an electric corporation's 104 demand-side programs under this section shall still be allowed to participate in 105 interruptible or curtailable rate schedules or tariffs offered by the electric 106 corporation.

141

- 107 11. The commission shall provide oversight and may adopt rules and 108 procedures and approve corporation-specific settlements and tariff provisions, independent evaluation of demand-side programs, as necessary, to ensure that 109 110 electric corporations can achieve the goals of this section. Any rule or portion of 111 a rule, as that term is defined in section 536.010, that is created under the 112 authority delegated in this section shall become effective only if it complies with 113 and is subject to all of the provisions of chapter 536 and, if applicable, section 114 536.028. This section and chapter 536 are nonseverable and if any of the powers 115 vested with the general assembly pursuant to chapter 536 to review, to delay the effective date, or to disapprove and annul a rule are subsequently held 116 117 unconstitutional, then the grant of rulemaking authority and any rule proposed 118 or adopted after August 28, 2009, shall be invalid and void.
- 12. Each electric corporation shall submit an annual report to the commission describing the demand-side programs implemented by the utility in the previous year. The report shall document program expenditures, including incentive payments, peak demand and energy savings impacts and the techniques used to estimate those impacts, avoided costs and the techniques used to estimate those costs, the estimated cost-effectiveness of the demand-side programs, and the net economic benefits of the demand-side programs.
- 13. Charges attributable to demand-side programs under this section shall be clearly shown as a separate line item on bills to the electrical corporation's customers.
 - 14. **[**(1) Any customer of an electrical corporation who has received a state tax credit under sections 135.350 to 135.362 or under sections 253.545 to 253.561 shall not be eligible for participation in any demand-side program offered by an electrical corporation under this section if such program offers a monetary incentive to the customer, except as provided in subdivision (4) of this subsection.
 - (2) As a condition of participation in any demand-side program offered by an electrical corporation under this section when such program offers a monetary incentive to the customer, the commission shall develop rules that require documentation to be provided by the customer to the electrical corporation to show that the customer has not received a tax credit listed in subdivision (1) of this subsection.
 - (3) The penalty for a customer who provides false documentation under subdivision (2) of this subsection shall be a class A misdemeanor.
 - (4) The provisions of this subsection shall not apply to any low-income

3

143 customer who would otherwise be eligible to participate in a demand-side 144 program that is offered by an electrical corporation to low-income customers.

15.] The commission shall develop rules that provide for disclosure of participants in all demand-side programs offered by electrical corporations under this section when such programs provide monetary incentives to the customer. The disclosure required by this subsection may include, but not be limited to, the following: the name of the participant, or the names of the principles if for a company, the property address, and the amount of the monetary incentive received.

393.1100. Each electrical corporation and gas corporation shall allow residential customers the option of refusing the installation of a remotely read two-way communication enabled meter or of requesting the removal of previously installed remotely read two-way communication enabled meter. Any residential customer whose usage shall be determined manually or through other meter reading technologies shall be assessed an additional charge for such meter reading, with the charge to be based on the electrical or gas corporation's incremental cost to read such meter using this alternative approach as compared to the costs to remotely read a two-way communication enabled meter.

393.1275. 1. The provisions of section 386.020 defining words, phrases, and terms shall apply to and determine the meaning of all such words, phrases, or terms as used in this section.

- 4 2. Electrical corporations shall defer to a regulatory asset or liability account any difference in state or local property tax expenses actually incurred, and those on which the revenue requirement used to set rates in the electrical corporation's most recently completed general rate proceeding was based. The regulatory asset or liability account balances shall be included in the revenue requirement used to set rates through an amortization over a reasonable period of time in such corporation's subsequent general rate proceedings, without any offset. The commission shall also adjust the rate base used to establish the revenue requirement of such corporation to reflect the unamortized 13 regulatory asset or liability account balances in such general rate 14 15 proceedings.
- 3. On and after the effective date of rates in an electrical corporation's next general rate proceeding concluding after the

effective date of this section, electrical corporation shall defer to a regulatory asset or liability account any difference in the prudently incurred operations and maintenance expense actually incurred to protect the reliability and security of systems, software, equipment, and 22 facilities connected to or controlling the electric system against 23 physical or cyber-security threats, including but not limited to generating stations, substations, and control centers, and the 24 operations and maintenance expense for such protection that was used 25 26 to set rates in the electrical corporation's prior general rate proceeding. The regulatory asset or liability account balances shall be 27 included in the revenue requirement used to set rates through an 28 amortization over a reasonable period of time in such corporation's 29 30 subsequent general rate proceedings, without any offset. The commission shall also adjust the rate base used to establish the revenue 31 requirement of such corporation to reflect the unamortized regulatory 33 asset or liability account balances in such general rate proceedings.

393.1400. 1. This section and section 393.1640 shall be known and 2 may be cited as the "Missouri Economic Development and 3 Infrastructure Investment Act".

- 2. For purposes of this section and section 393.1640, the following terms shall mean:
 - (1) "Commission", the public service commission;

6

- 7 (2) "Electrical corporation", the same as defined in section 8 386.020, but shall not include an electrical corporation regulated under 9 chapters 386 and 393 but not subject to the commission's jurisdiction over its rates, financing, accounting, or management under subsection 2 of section 393.110;
- 12 (3) "Qualifying electric plant", shall consist of all rate base 13 additions except those rate base additions that increase revenues by 14 allowing service to new customer premises;
- 15 (4) "Relevant period", a period starting on the date on which rate 16 base additions are accounted for in developing an electrical 17 corporation's revenue requirement in a general rate proceeding, and 18 ending on the date on which rate base additions are accounted for in 19 the electrical corporation's subsequent general rate proceeding, with 20 the first relevant period starting on the effective date of this section.
 - 3. (1) Notwithstanding any provisions of sections 393.130,

393.140, 393.150, 393.260, and 393.270 to the contrary, electrical corporations shall defer depreciation expense and return, calculated as provided for in this section, associated with all of the projects that constitute qualifying electric plant placed in service during each relevant period. The amounts so deferred shall be recorded to a separate regulatory asset account, and the balance in the regulatory asset account for the relevant period shall be included in the electrical corporation's rate base in each of the electrical corporation's general rate proceedings without any offset, reduction, or adjustment based upon consideration of any other factor, other than as provided for in subdivision (2) of this subsection and as limited by subsection 7 of this section. The expiration of this section shall not affect the continued inclusion in rate base and amortization after such expiration or determination of regulatory asset balances that arose under this section prior to such expiration or determination.

- (2) The amounts deferred to regulatory asset accounts under this section shall be subject to adjustment to reflect any prudence disallowances ordered by the commission in the general rate proceeding in which the qualifying electric plant for which deferrals were recorded is first included in its rate base.
- (3) The regulatory assets created under this section shall include carrying costs at the electrical corporation's weighted average cost of capital, plus applicable federal, state, and local income or excise taxes, from the electrical corporation's most recently completed general rate proceeding concluded prior to the relevant period, and shall be amortized and recovered in rates, subject to the limitations of subsection 7 of this section, beginning with the effective date of rates in the general rate proceeding where the regulatory asset account balance is first included in its rate base, over twenty years.
- 4. For purposes of calculating deferred depreciation expense and return under this section:
- (1) Deferred depreciation expense shall equal the original cost of each project included in the qualifying electric plant placed in service during the relevant period less retirements of plant replaced by such qualifying electric plant, multiplied by the depreciation rate applicable to qualifying projects, calculated using the depreciation rates used to set rates in the electrical corporation's most recently

59 completed general rate proceeding concluded prior to the end of the 60 relevant period;

- (2) Deferred return shall equal the change in plant-related rate base during the relevant period multiplied by the electrical corporation's weighted average cost of capital used to determine the electrical corporation's revenue requirement in the electrical corporation's most recently completed general rate proceeding 66 concluded prior to the relevant period, plus applicable federal, state, 67 and local income or excise taxes. The change in plant-related rate base during the relevant period shall equal the sum of the original cost of all of the projects included in the qualifying electric plant placed in 70 service during the relevant period less accumulated depreciation on such plant; and less the marginal increase in accumulated deferred income tax assets and liabilities, including deferred tax assets from net operating losses, attributable to such plant in the aggregate; and less the change in accumulated depreciation, excluding retirements, and the change in plant-related accumulated deferred income tax assets and 76 liabilities, including deferred tax assets from net operating losses, attributable to such plant in the aggregate recorded during the relevant period arising from assets that were reflected in the electrical corporation's regulated rate base before the beginning of the relevant period.
 - (3) The electrical corporation shall perform the calculation of deferred depreciation and return under this subsection for all of the projects included in the qualifying electric plant placed in service during the relevant period and shall defer the calculated amounts monthly, with the qualifying projects to be deemed to have been placed in service on the fifteenth day of the month in which they were placed in service.
 - 5. Depreciation expense and return from the end of any relevant period to the effective date of rates in the general rate proceeding where deferrals related to qualifying electric plant placed in service during that general rate proceeding are included in the electrical corporation's rate base, shall also be deferred on qualifying electric plant placed in service during that relevant period. The depreciation expense and return deferred under this subsection shall also be recorded to the regulatory asset account that will be included in the

96 electrical corporation's rate base in the electrical corporation's subsequent general rate proceeding, together with deferrals arising under subsection 3 of this section of depreciation expense and return for qualifying electric plant placed in service during the relevant 100 period applicable to the electrical corporation's general rate proceeding. 101

- 6. In each general rate proceeding, the revenue requirement resulting from the inclusion of sums deferred to a regulatory asset account authorized under this section in rate base and the amortization of such a regulatory asset shall be allocated to each rate class in the same manner as the remainder of the change in the revenue requirement is allocated.
- 7. Notwithstanding the foregoing provisions of this section, the cumulative incremental increase in the electrical corporation's retail revenue requirement arising from incremental investments and regulatory assets authorized by this section shall not exceed the 112 maximum retail revenue requirement impact. The "maximum retail revenue requirement impact" shall be determined in each general rate 114 proceeding by multiplying one-tenth of one percent by the number of 115 completed months between the date through which rate base additions 116 were accounted for in the electrical corporation's most recently completed general rate proceeding before the effective date of this section and the date through which rate base additions are accounted 119 for in each general rate proceeding when the maximum retail revenue requirement impact is determined. For purposes of this subsection, "incremental investments" shall be equal to the cumulative gross plant additions that exceed the adjusted average gross plant additions. Such "adjusted average gross plant additions" shall be determined by dividing the average gross plant additions reported in the electrical corporation's published financial statements for calendar years 2014, 2015, and 2016 by twelve and then multiplying that quotient by the number of completed months between the date through which rate base additions were accounted for in the electrical corporation's most recently completed general rate proceeding before the effective date of 129this section and the date through which rate base additions are accounted for in each general rate proceeding when the maximum retail revenue requirement impact is determined. The incremental

169

133 increase in the electrical corporation's retail revenue requirement arising from incremental investments and the regulatory assets 134 135 authorized by this section shall equal the sum of the total return on and amortization of the regulatory assets authorized by this section, 136 137 and the depreciation and return on the incremental investments. If the incremental increase in the electrical corporation's retail revenue 138 requirement arising from incremental investments and the regulatory 139 140 assets authorized by this section in any general rate proceeding would otherwise exceed the maximum retail revenue requirement impact in 141 that general rate proceeding, the regulatory asset to be included in rate 142 143 base in that general rate proceeding shall not include any deferred depreciation or deferred return that would otherwise have been 144 145 authorized by this section on the gross plant additions to be added to rate base in that general rate proceeding that caused such incremental 146 increase to exceed the maximum retail revenue requirement 147 148 impact. For purposes of the immediately preceding sentence, gross 149 plant additions shall be deemed to occur in chronological order by the 150 additions' in-service dates on the electrical corporation's books.

8. Beginning February twenty-eighth of the year after the year in which this section becomes effective, electrical corporations that defer depreciation expense and return authorized under this section shall submit to the commission a five-year capital investment plan setting forth the general categories of capital expenditures the electrical corporation will pursue in furtherance of modernizing and securing its infrastructure. The plan shall also include a specific capital investment plan for the first year of the five-year plan consistent with the level of specificity the electrical corporation has historically used for annual capital budgeting purposes. Project specific information is not required to be included for the five-year period covered by the plan. No later than February twenty-eighth of each subsequent year during which the electrical corporation is continuing to defer depreciation and expense and return as provided for by subsection 3 of this section, the electrical corporation shall submit to the commission an updated capital investment plan for the subsequent five years, a specific capital investment plan for the subsequent calendar year, and report the capital investments for the prior calendar year. Within thirty days of the filing of any capital investment plan or annual update to an existing plan, the

3

4

11

170 electrical corporation shall host a public stakeholder meeting to answer questions and receive feedback about the plan. The electrical corporation shall provide public notice of the meeting to its customers on its website, and the meeting shall be located within the electrical 174 corporation's service territory. After feedback is received, the electrical corporation shall file a notice with the commission of any modifications 175176 the capital investment plan it has accepted. The plan, 177 implementation of the plan, or schedule changes from year to year shall 178 not constitute evidence of imprudence of the capital investment plan or 179 the investments made under such plan. The fact that the electrical 180 corporation invests more or less than the amounts specified in its initial or updated plans shall not constitute evidence of imprudence. The 181 182 submission made under this section shall be made publicly available; provided however, portions of the submission that contain confidential 183 184 and proprietary information may be protected from public disclosure in 185 a manner consistent with the rules or orders of the commission as applicable. Nothing in this section shall require the electrical 186 corporation to publicly disclose confidential, proprietary, or financially 187188 sensitive information, any market sensitive information, or information that would otherwise violate rules promulgated by the Federal Energy 189 Regulatory Commission designed to protect the integrity of wholesale 190 191 power markets. The submission of a capital investment plan under this 192section shall not affect in any way the commission's authority with 193 respect to the grant or denial of a certificate of convenience and 194 necessity under section 393.170.

393.1410. 1. The provisions of section 386.020 defining words, phrases, and terms, shall apply to and determine the meaning of all such words, phrases, or terms as used in this section.

- 2. It shall be the policy of the state of Missouri for the commission to support expenditures by electrical corporations that maintain or improve the reliability, safety, security, or automation of electric infrastructure, including through the use of the latest technologies to meet the needs and expectations of customers. It shall also be the policy of the state of Missouri for the commission to approve rates designed to allow electrical corporations to recover their full cost of service and provide a reasonable opportunity to earn a fair return.
- 3. The commission may utilize rate adjustment mechanisms not

3

7

otherwise specifically authorized by statute including, but not limited to, mechanisms to promote modernization and replacement of an electrical corporation's infrastructure. The commission may also use partially forecasted test years, true-ups of revenue requirement components, tracking mechanisms, grid modernization incentive mechanisms, interim rates, performance-based rates, decoupling, or decisional pre-approval with post construction review of construction projects.

4. The public service commission is authorized to promulgate 21rules to implement the provisions of this section. Any rule or portion 23 of a rule, as that term is defined in section 536.010 that is created under the authority delegated in this section shall become effective only if it 24 complies with and is subject to all of the provisions of chapter 536, and, 25 if applicable, section 536.028. This section and chapter 536 are 26 nonseverable and if any of the powers vested with the general assembly 28 pursuant to chapter 536, to review, to delay the effective date, or to disapprove and annul a rule are subsequently held unconstitutional, 29 then the grant of rulemaking authority and any rule proposed or 30 adopted after August 28, 2017, shall be invalid and void. 31

393.1600. 1. As used in this section, the following terms shall 2 mean:

- (1) "Electrical corporation", the same as defined in section 386.020, but shall not include an electrical corporation regulated under chapters 386 and 393 but not subject to the commission's jurisdiction over its rates, financing, accounting, or management under subsection 2 of section 393.110;
- 8 (2) "Processed solid biomass engineered fiber fuel", any fuel 9 derived from raw biomass feedstock produced in this state that is 10 changed from its original form by pyrolysis or other thermal or 11 thermochemical conversion in a manufacturing process resulting in a 12 solid fuel product with a heat value of at least eight thousand four 13 hundred British Thermal Units per pound on an as received basis.
- 2. Any electrical corporation that incurs costs to modify such electrical corporation's owned fossil-fired generating plant located in Missouri solely to accommodate the test burn of a processed solid biomass engineered fiber fuel from Missouri-based products shall be allowed to timely reflect in its rates the prudently-incurred costs or

18

- 19 investments incurred or made for such modification.
- 20 3. Any electrical corporation that elects to test burn a processed 21solid biomass engineered fiber fuel in such electric utility's owned fossil-fired generating plant located in Missouri shall be allowed to 23 timely reflect in its rates the prudently-incurred costs of the processed solid biomass engineered fiber fuel from Missouri-based products.
- 4. The total expenditures to be reflected in the rates of an electrical corporation for evaluating the feasibility of using processed solid biomass engineered fiber fuel from Missouri-based products shall not exceed two million dollars. The total additional expenditures to be reflected in the rates of an electrical corporation for Missouri-based 30 fossil-fired generating plant modifications to accommodate the test burn of processed solid biomass engineered fiber fuel shall not exceed ten million dollars.
- 393.1610. 1. The commission shall permit electrical corporation to recover costs incurred for projects to deploy electrical generation, distribution, or transmission technology or equipment with which the electrical corporation has little or no operational experience, including but not limited to projects involving renewable generation, microgrids, and energy storage, with recovery allowed without a demonstration by the electrical corporation that the technology or equipment represents the least cost alternative; provided however, that 9 any such project:
 - (1) Is designed to advance the electrical corporation's operational knowledge of deploying such technology or equipment or otherwise produces beneficial knowledge or experience;
 - (2) Is executed in a prudent manner; and
 - (3) Increases the electrical corporation's gross rate base by no more than one percent as of the time investments made under this section are included in rate base for ratemaking purposes.
- 2. The requirements of section 393.170 shall not apply to the construction by an electrical corporation of a renewable energy generation unit that has a capacity of 1 megawatt or less. For purposes of this section, "electrical corporation" shall mean the same as defined 20 in section 386.020, but shall not include an electrical corporation regulated under chapters 386 and 393 but not subject to the

27

28

2930

31

34

35

commission's jurisdiction over its rates, financing, accounting, or management under subsection 2 of section 393.110.

393.1640. 1. Subject to the limitations provided for in subsection 5 of this section, an electrical corporation shall make available an economic development rider to customers served under its large power service rate schedule that add incremental demand of at least five hundred kilowatts after November 1, 2016, and that meet either of the following criteria:

- 7 (1) Demand at a single premises greater than fifteen megawatts 8 and an annual load factor of at least fifty-five percent; or
- 9 (2) Aggregated large power service demands of greater than 10 thirty megawatts at up to five separate premises served by the electrical 11 corporation.
- 12 The rider shall provide that the increases in electric service billing units by any such customer related to such incremental demand shall qualify for a special electric rate. The special rate shall be fifty-eight percent of the cents per kilowatt-hour realization derived from 15 application of all rate components to the customer's load prior to the 16 17 increase in electric service billing units plus ten percent of the remainder of such cents per kilowatt-hour realization and shall be 18 19 applied to the electric bill related to such incremental load from the 20 date when the meter has been permanently set until the earlier of the 21 date that the customer's incremental load no longer exceeds the 22 minimum incremental demand or no longer meets the fifty-five percent 23 annual load factor, if applicable; provided however, that the discounts 24 shall not extend beyond the date this section expires. The incremental demand to which a discount under this subsection applies shall not 25receive a discount under subsection 4 of this section. 26
 - 2. Subject to the limitations provided for in subsection 5 of this section, a large power service account that is new to the electrical corporation's system after November 1, 2016, with demand greater than fifteen megawatts and an annual load factor of at least fifty-five percent shall qualify for a discount of twenty percent on all rate elements of the electric bill from the date when the meter has been permanently set until the earlier of the date that the customer's load no longer exceeds the minimum fifteen megawatts demand or no longer meets the fifty-five percent annual load factor; provided however, that the discounts shall

36 not extend beyond the date this section expires. A new account to which a discount under this subsection applies shall not receive a discount 37 under subsection 4 of this section. 38

- 3. Subject to the limitations provided for in subsection 5 of this section, an electrical corporation shall make available an economic development rider to customers served under its large power service rate schedule that added incremental demand of at least five hundred kilowatts on or prior to November 1, 2016, are being served under an existing economic development rider on the effective date of this section, and that meet either of the following criteria:
- (1) Demand at a single premises greater than fifteen megawatts and an annual load factor of at least fifty-five percent; or
- 48 (2) Aggregated large power service demands of greater than 49 thirty megawatts at up to five separate premises served by the electrical corporation. 50
- The rider shall provide that the incremental increases in electric service billing units by any such customer related to such incremental demand taken under an existing economic development rider on the effective date of this section shall qualify for a discount of twenty percent on all 55 rate elements of the electric bill related to such incremental load from the effective date of this section until the earlier of the date that the customer's incremental load no longer exceeds the minimum incremental demand or no longer meets the fifty-five percent annual load factor, if applicable; provided however, that the discounts shall not extend beyond the date this section expires. The rider shall also provide that the discount provided under the existing economic development rider shall terminate effective with the effectiveness of the discount provided under this subdivision. The incremental demand to which a discount under this subsection applies shall not receive a discount under subsection 4 of this section.
 - 4. Subject to the limitations provided for in this subsection and subsection 5 of this section, an electrical corporation shall make available an economic retention and development rider available to customers served under its large power service rate schedule if the customer meets either of the following criteria:
- 71 (1) The customer has a demand on a single account greater than forty megawatts and an annual load factor of at least eighty percent; or 72

73 (2) The customer has an aggregated large power service demands 74 with a service delivery voltage of thirty-four and one-half kilovolts or 75 higher of greater than forty megawatts through seven or more separate 76 accounts served by the electrical corporation.

77 The economic retention and development rider required by this subsection shall provide for a discount of fifteen percent on all rate 78 elements of the large power service rate schedule, as those rate 79 elements appeared on January first of the year in which the customer 80 81 became eligible for the economic retention and development rider, with the discount to start on the first day of the billing cycle month following 82 the later of the effective date of this section or the date the customer became eligible and continuing, without regard to any increases that 84 might occur in the large power service rate schedule rate elements, 85 until the date that the customer's load or load factor no longer exceed 86 the minimums provided for in this subsection; provided however, that 87 88 the discounts shall not extend beyond the date this section expires.

89 5. The reduced revenues arising from the discounts provided by subsections 1, 2, 3, and 4 of this section shall be borne by the electrical 90 corporation's customer classes other than its large power service class 91 by allocating the impact of the reduced revenues to such customer 92 classes through a uniform percentage adjustment to all elements of the 93 base rates of all such customer classes. To qualify for the discounted 95 rates provided for in this section, customers shall meet the applicable 96 criteria at the time the meter is permanently set and annually 97 thereafter, in the case of the discounts provided for in subsections 1, 2, 98 or 3, and at the later of the effective date of this section or the date the customer became eligible and annually thereafter, in the case of 99 100 subsection 4. In the case of the discounts provided for by subsections 1, 2, 3, or 4 of this section, whether a customer continues to meet the 101 102 applicable criteria annually thereafter shall be determined at the end of each calendar year based on metering data for such calendar year. If 103 104 such data indicates that the customer did not meet the criteria for such 105 calendar year, it shall thereafter no longer qualify for the discounted 106 rate.

393.1650. 1. For purposes of this section, the following terms shall

² mean:

SCS SB 190 26

30

31 32

- 3 (1) "Commission", the Missouri public service commission established under section 386.040;
- 5 (2) "Electrical corporation", a corporation with more than one million retail electric customers that otherwise meets the definition of "electrical corporation" in section 386.010.
- 8 2. Electrical corporations shall develop a qualification process and make such process open to all contractors seeking to provide 9 construction and construction-related services for projects on the 10 11 electrical corporation's distribution system. Contractors shall have the opportunity to register on the electrical corporation's vendor 13 registration site and be evaluated for bid opportunities. Under the 14 qualification process, electrical corporations may specify eligibility 15 requirements typically accepted by the industry, including but not 16 limited to, experience, performance criteria, safety policies, and insurance requirements to be met by any contractor seeking to participate in competitive bidding to provide construction and construction-related services for distribution system projects, and the electrical corporation shall not weight any contractor favorably or 20unfavorably due to affiliation with a labor organization or union, except 21where the work is being performed pursuant to a union-only project 23labor agreement which requires that participating contractors use union represented labor. Contractors that meet the eligibility requirements 25set by electrical corporations shall be eligible to participate in the 26competitive bidding process for providing construction and 27construction-related services for distribution system projects, and the 28 contractor making the lowest and best bid shall be awarded such 29 contract.
- 3. Within thirty days after the effective date of this section, electrical corporations shall file a verified statement with the commission confirming that it has in place a qualification process for the competitive bidding of construction and construction-related 33 services for distribution system projects, and that such process conforms with the requirements of this section. The commission shall 35 have the authority to verify the statement to ensure compliance with 36 this section. If the electrical corporation files a general rate 37proceeding, it shall submit concurrently with its submission of the rate schedules that initiate such general rate proceeding a verified statement

confirming that it is using the qualification process for the competitive bidding of construction and construction-related services for distribution system projects required by this section for no less than ten percent of the combined external installation expenditures made by the electrical corporation's operating units in Missouri for construction and construction-related services for distribution system projects, and that such process conforms with the requirements set forth in this section. The commission shall have the authority to verify the statement to ensure compliance with this subsection.

- 4. Nothing in this section shall be construed as requiring any electrical corporation, subject to the requirements of this section, to use a qualified contractor or competitive bidding process in the case of an emergency project, or to terminate any existing contract with a contractor prior to its expiration; provided however, that the use of any pre-existing contract for construction or construction-related services for distribution system projects shall not qualify as fulfilling the ten percent requirement set forth in subsection 3 of this section. For contractors not qualifying through the competitive bid process, the electrical corporation, upon request from the contractor, shall provide information from the process in which the contractor can be informed as to how to be better positioned to qualify for such bid opportunities in the future.
- 5. By December 31, 2019, and annually thereafter, the commission shall submit a report to the general assembly on the effects of this section, including electrical corporation compliance, potential legislative action regarding this section, the costs of constructing distribution system projects prior to the implementation of this section compared to after the implementation of this section, and any other information regarding the processes established under this section that the commission deems necessary.

393.1660. Sections 393.1400, 393.1600, 393.1640, and 393.1650 expire

on December 31, 2027, except to the extent expressly provided.

/
