

115TH CONGRESS  
1ST SESSION

# H. R. 1898

To amend title XVIII of the Social Security Act to improve access to, and utilization of, bone mass measurement benefits under part B of the Medicare program by establishing a minimum payment amount under such part for bone mass measurement.

---

## IN THE HOUSE OF REPRESENTATIVES

APRIL 4, 2017

Mr. MEEHAN (for himself, Mrs. BLACKBURN, Mr. LARSON of Connecticut, Ms. SÁNCHEZ, Mr. SESSIONS, Mr. ROE of Tennessee, Ms. MOORE, Mr. DEFAZIO, Ms. PINGREE, Ms. NORTON, Mr. GRIJALVA, and Mr. MCGOVERN) introduced the following bill; which was referred to the Committee on Energy and Commerce, and in addition to the Committee on Ways and Means, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

## A BILL

To amend title XVIII of the Social Security Act to improve access to, and utilization of, bone mass measurement benefits under part B of the Medicare program by establishing a minimum payment amount under such part for bone mass measurement.

1 *Be it enacted by the Senate and House of Representa-*  
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. FINDINGS.**

4 The Congress finds the following:

1           (1) Osteoporosis is a major public health prob-  
2           lem with 54 million Americans as of 2010 having ei-  
3           ther low bone mass or osteoporosis, responsible for  
4           over 2 million fractures per year, including over  
5           300,000 hip fractures. The estimated total cost of  
6           these fractures in 2005 was \$17 billion and expected  
7           to rise to over \$25 billion by 2025.

8           (2) Osteoporosis is a silent disease that often is  
9           not discovered until a fracture occurs. One out of  
10          two women and up to one of four men will suffer an  
11          osteoporotic fracture in their lifetimes.

12          (3) While both men and women may develop  
13          osteoporosis, 80 percent are women.

14          (4) Most women are not aware of their personal  
15          risk factors for osteoporosis, the prevalence of, or  
16          the morbidity and mortality associated with the dis-  
17          ease, despite the fact that broken bones due to  
18          osteoporosis lead to more hospitalizations and great-  
19          er health care costs than heart attack, stroke, or  
20          breast cancer in women age 55 and above.

21          (5) A woman's risk of hip fracture is equal to  
22          her combined risk of breast, uterine, and ovarian  
23          cancer. More women die in the United States in the  
24          year following a hip fracture than from breast can-  
25          cer.

1           (6) One out of four people who have an  
2           osteoporotic hip fracture will need long-term nursing  
3           home care. Half of those who experience osteoporotic  
4           hip fractures are unable to walk without assistance.

5           (7) Elderly women are so afraid of losing their  
6           independence that 8 in 10 would rather die than  
7           break their hip and be admitted to a nursing home.

8           (8) Bone density testing is more powerful in  
9           predicting fractures than cholesterol is in predicting  
10          myocardial infarction or blood pressure in predicting  
11          stroke.

12          (9) Osteoporosis remains both under-recognized  
13          and under-treated. Over a 7-year period (2007–  
14          2013), 45 percent of older female Medicare bene-  
15          ficiaries had no DXA bone density test, and 25 per-  
16          cent had only one test.

17          (10) DXA testing in older women declined in  
18          2014 to the lowest point in 10 years.

19          (11) A decade of steady decline in hip fractures  
20          stopped abruptly in 2013. Since then, there have  
21          been more than 14,000 additional hip fractures,  
22          costing over \$560 million, leading to 2,800 more  
23          deaths than expected if the decline had continued.

1 **SEC. 2. INCREASING ACCESS TO OSTEOPOROSIS PREVEN-**  
2 **TION AND TREATMENT.**

3 Section 1848(b) of the Social Security Act (42 U.S.C.  
4 1395w-4(b)) is amended—

5 (1) in paragraph (4)(B)—

6 (A) by striking “and the first 2 months of  
7 2012” and inserting “the first 2 months of  
8 2012, 2017, and each subsequent year”; and

9 (B) by striking “paragraph (6)” and in-  
10 serting “paragraphs (6) and (12)”; and

11 (2) by adding at the end the following:

12 “(12) ESTABLISHING MINIMUM PAYMENT FOR  
13 OSTEOPOROSIS TESTS.—For dual-energy x-ray  
14 absorptiometry services (identified by HCPCS codes  
15 77080 and 77082 and successor codes 77085 and  
16 77086 (and any succeeding codes)) furnished during  
17 2017 or a subsequent year, the Secretary shall es-  
18 tablish a national minimum payment amount under  
19 this subsection—

20 “(A) for such services identified by  
21 HCPCS code 77080, equal to \$98 (with na-  
22 tional minimum payment amounts of \$87.11 for  
23 the technical component and \$10.89 for the  
24 professional component); and

25 “(B) for such services identified by  
26 HCPCS code 77086, equal to \$35 (with na-

1           tional minimum payment amounts of \$27.18 for  
2           the technical component and \$7.82 for the pro-  
3           fessional component); and

4           “(C) for the bundled code for dual energy  
5           absorptiometry and vertebral fracture assess-  
6           ment studies identified as HCPCS code 77085,  
7           equal to \$133 (with national minimum payment  
8           amounts of \$114.29 for the technical compo-  
9           nent and \$18.71 for the professional compo-  
10          nent).

11          Such minimum payment amounts shall be adjusted  
12          by the geographical adjustment factor established  
13          under subsection (e)(2) for the services for the re-  
14          spective year.”.

○
