S. 774

To address the psychological, developmental, social, and emotional needs of children, youth, and families who have experienced trauma, and for other purposes.

IN THE SENATE OF THE UNITED STATES

MARCH 29, 2017

Ms. HEITKAMP (for herself, Mr. DURBIN, Mr. FRANKEN, and Mr. BOOKER) introduced the following bill; which was read twice and referred to the Committee on Health, Education, Labor, and Pensions

A BILL

To address the psychological, developmental, social, and emotional needs of children, youth, and families who have experienced trauma, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Trauma-Informed
5 Care for Children and Families Act of 2017”.

6 **SEC. 2. FINDINGS.**

7 Congress makes the following findings:

8 (1) The 2007 Great Smoky Mountains Study, a
9 representative longitudinal study of children, found

1 that by age 16, more than 67 percent of the children
2 had been exposed to 1 or more traumatic events,
3 such as child maltreatment, domestic violence, or
4 sexual assault.

5 (2) According to a 2009 Office of Juvenile Jus-
6 tice and Delinquency Prevention study of children
7 ages 0 through 17, more than 60 percent of the chil-
8 dren surveyed were exposed to violence within the
9 past year, either directly or indirectly.

10 (3) According to the Administration for Chil-
11 dren and Families, the rate of substantiated reports
12 of child maltreatment in fiscal year 2015 was 9.2
13 per 1,000 children ages 0 through 17, with children
14 under age 1 having the highest rate of 24.2 per
15 1,000 children.

16 (4) According to the Office of Juvenile Justice
17 and Delinquency Prevention, a longitudinal study of
18 youth detained at a juvenile detention center in Chi-
19 cago showed that 92.5 percent of youth had experi-
20 enced at least 1 trauma, and 84 percent had experi-
21 enced more than 1 trauma.

22 (5) The National Intimate Partner and Sexual
23 Violence Survey conducted by the Centers for Dis-
24 ease Control and Prevention revealed that nearly 1
25 in 5 women reported having been the victim of a

1 rape at some time during their lives. Seventy-eight
2 percent experienced their first rape before the age of
3 25.

4 (6) A 2017 study found that abuse and mal-
5 treatment suffered as a child was associated with
6 post-traumatic stress disorder and opioid-related
7 misuse as an adult, and recommended that trauma
8 history and post-traumatic stress disorder symptom
9 severity be addressed as part of opioid addiction
10 treatment.

11 (7) Findings from the Adverse Childhood Expe-
12 riences Study conducted by the Centers for Disease
13 Control and Prevention have shown that adverse
14 childhood experiences predispose children towards
15 negative trajectories from infancy through adoles-
16 cence. Followup representative studies have shown
17 the long-range impact of early trauma exposure on
18 adult health conditions, including heart disease,
19 asthma, and mental health.

20 (8) According to a subsequent study conducted
21 by the Centers for Disease Control and Prevention,
22 adults who had been exposed to multiple adverse
23 childhood experiences were significantly more likely
24 to be unemployed, to be living in poverty, and not

1 to have graduated high school than adults who had
2 zero adverse childhood experiences.

3 (9) According to a 2008 finding by the Na-
4 tional Child Traumatic Stress Network, educators
5 who work directly with traumatized children and
6 adolescents are particularly vulnerable to secondary
7 traumatic stress, experiencing burnout, fatigue, irri-
8 tability, and other symptoms, and can be supported
9 through early recognition of that stress, self-care,
10 and trauma-informed support systems.

11 (10) Findings from a 2012 study conducted by
12 the Centers for Disease Control and Prevention in-
13 cluded an estimate that the total lifetime burden of
14 child maltreatment cases that occur each year in the
15 United States, including medical, welfare, and crimi-
16 nal justice costs, is \$124,000,000,000.

17 (11) According to the Centers for Disease Con-
18 trol and Prevention's National Health and Nutrition
19 Examination Survey, only half of children ages 8
20 through 15 with a mental disorder had received
21 treatment for their disorder within the past year.
22 Children with anxiety disorders such as post-trau-
23 matic stress disorder were the least likely to be
24 treated, with only 32.2 percent having received
25 treatment for a mental disorder in the past year.

1 (12) According to a 2014 report of the Institute
2 of Medicine and National Research Council of the
3 National Academies entitled “New Directions in
4 Child Abuse and Neglect Research”, research has
5 shown that child abuse and neglect experiences re-
6 sulted in higher risk for behavioral health problems
7 (such as depression and substance use) throughout
8 life, but that with informed prevention approaches,
9 child abuse and neglect can be both preventable and
10 manageable.

11 (13) According to a 2017 finding by the Na-
12 tional Child Traumatic Stress Network, of the chil-
13 dren served by the Network with problems in the
14 clinical range when entering care, 83 percent showed
15 significant improvements in post-traumatic stress
16 disorder, behavioral problems, or traumatic stress
17 symptoms after receiving evidence-based treatments.

18 (14) According to a 2008 Washington State re-
19 port on prevention programs that assessed both cost
20 and effectiveness, evidence-based, two-generational
21 child trauma treatments such as Parent-Child Inter-
22 action Therapy return \$3.64 per dollar of cost.
