

War Room/DailyClout Pfizer Analysis

Follow-the-Money Team Micro-Report 1: Fines, Penalties and Violations

What has Pfizer done to earn your trust with its SARS-CoV-2 (COVID-19) mRNA “vaccine”?

Why should we trust Pfizer?

“Pfizer, which had tested the drug...said it was “pleased” that payments were finally being made under a settlement reached...” – *The New York Times*, Aug. 11, 2011, regarding their Nigerian settlement

To be clear, you may not be the patient, but instead an experiment; not the customer; but a calculated cost of doing business. Pfizer has a consistent history of fines, penalties, and violations regarding product safety, illegal promotion of their products, bribes, and kickbacks. They even illegally used children as trial subjects in Nigeria.

Were you aware Pfizer paid the largest health care fraud settlement in US history?

Generally, Pfizer violations fall into six categories: safety-related offenses, drug or medical equipment safety, False Claims Act, illegal off-label or unapproved promotion, kickbacks, bribery, and inflating wholesale prices to set Medicaid rates.

A sampling of those violations and the related penalties and fines are listed to the right. Reference links for many, many more violations, penalties, and litigation settlements may be found via the violation tracker link on the left. These do not include patent litigation. Moderna, one of the other major COVID “vaccine” manufacturers, is currently suing Pfizer and BioNTech, Pfizer’s partner, over patent violations.

Did you know that within the first 90 days of the product’s launch, Pfizer was aware of over 1,223 deaths and tens of thousands of Adverse Events caused by the company’s mRNA COVID-19 “vaccine”?

Were you aware of these harms?

Did you receive information about these risks prior to treatment to allow for informed consent?

\$2.3 billion: In 2009, Pfizer paid \$2.3 billion to resolve criminal and civil penalties, the largest in U.S. history, for illegal off-label or unapproved promotion of medical products.

\$975 million: In 2005, Pfizer paid an estimated \$750 million, taking a total charge of \$975 million to cover legal costs, which involved 35,000 personal injury lawsuits “alleging that the diabetes drug Rezulin,” sold by Pfizer subsidiary Warner-Lambert, caused liver damage.

\$894 million: In 2008, Pfizer took a charge of \$894 million to cover litigation costs; \$745 million was to cover product liability lawsuits related to its anti-inflammatory drugs, Bextra and Celebrex.

\$785 million: In 2016, Pfizer paid \$785 million. Pfizer acquired Wyeth in 2009, approximately three years after Wyeth had ended the conduct that gave rise to the settlement. Wyeth knowingly reported to the government false and fraudulent prices on two of its proton pump inhibitor drugs, Protonix Oral and Protonix IV.

\$75 million: In 1996, Pfizer conducted an illegal trial on 200 children in Nigeria using an experimental meningitis drug, Trovan, and an older drug. Eleven children died, and dozens were harmed with blindness, deafness, paralysis, and brain damage.
