The Honorable Treg R. Taylor  
Attorney General  
Alaska Dept. of Law  
1031 West 4th Avenue, Suite 200  
Anchorage, AK 99501-1994

**RE State criminal investigation of Centers for Disease Control (CDC) officials for reckless endangerment under Alaska Stat. § 11.41.250**

Dear Mr. Taylor:

I support your signing of the Section 553(e) Petition for Rulemaking sent to Secretary Becerra & Administrator Brooks-LaSure on November 17, 2022.

There may be reasonable suspicion to investigate CDC officials for reckless endangerment of Alaskans, as follows:

The enclosed/linked article asserts:

**[T]he CDC delayed reporting the incidence of myocarditis to the general public for three months after the first statistically significant signal appeared in the VAERS database.** The delay kept about 120,000,000 Americans in the dark until after they had already unknowingly exposed themselves to one or more doses of the COVID-19 injections that were, according to the analysis presented here, in all probability, the proximate cause of the increased incidence of myocarditis, especially in young male Americans from 8 to 21 years of age.<sup>1</sup>

If that assertion is correct,<sup>2</sup> that level of omission may provide reasonable suspicion to investigate CDC officials for "recklessly engag[ing] in conduct [omission to report safety signal] which create[d] a substantial risk of serious physical injury to [Alaskans] under Alaska Stat. § 11.41.250, because Alaskans may have acted in reliance on CDC information, either directly or vicariously via state and county health agency recommendations, getting vaccinated unaware of risk already

<sup>1</sup> Karl Jablonski & Brian Hooker, *Delayed Vigilance: A Comment on Myocarditis in Association with the COVID-19 Injections*, International Journal of Vaccine Theory, Practice, and Research 2(2), October 17, 2022 (quotation from abstract).

<sup>2</sup> On information and belief, at least one health freedom advocacy organization has filed, or will soon file, a Freedom of Information Act (FOIA) request for relevant internal CDC emails.

known to CDC. This is especially problematic considering emerging data about post-Covid-19 vaccination myocarditis.<sup>3</sup>

I believe CDC should have timely reported the myocarditis safety signal to both the general public and state health agencies and its omission may have provide reasonable suspicion to investigate.

There cannot be "informed consent" without being "informed."

Also, CDC's recent decision to recommend new omicron boosters for children as young as five years old, a recommendation reportedly made without even convening a meeting of CDC's panel of vaccine experts,<sup>4</sup> similarly may give rise to reasonable suspicion to investigate for reckless endangerment, because Alaskans may (again?) directly or vicariously rely on CDC's recommendation and get their children vaccinated without full data.<sup>5</sup>

As you are aware, federal officials do not have absolute Supremacy Clause immunity from state law prosecution. *See, e.g., Wyoming v. Livingston*, 443 F.3d 1211 (10th Cir. 2006) (discussing Supremacy Clause, removal, and "reasonable and necessary").<sup>6 7</sup>

I encourage your office to consider whether investigating federal officials for state law prosecutions is warranted for either their actions mentioned herein or other pandemic response activities.

I recently sent a similar letter to my home state's attorney general, some other state attorneys general, and a county prosecutor in Wyoming.

Sincerely,

/s/ Edward A. Berkovich

Attorney at Law, Utah Bar. No. 6180

Enc.

<sup>3</sup> Sintaroo Watanabe & Rokuro Hama, *SARS-CoV-2 Vaccine and Increased Myocarditis Risk: A Population Based Comparative Study in Japan*, <https://www.medrxiv.org/content/10.1101/2022.10.13.22281036v1> (preprint) (accessed 11/05/2022), and citations therein to already-published studies.

<sup>4</sup> CDC recommends Covid omicron booster shots for kids as young as 5 years old (cnbc.com) (accessed 11/16/2022). I have filed a FOIA request for the document memorializing that recommendation.

<sup>5</sup> This CDC recommendation is further problematic, since it reportedly was made in reliance on the Food and Drug Administration (FDA)'s authorizing those shots for kids without direct human data on their effectiveness. *Id.* Relatedly, even an FDA panel member questioned a recent, separate FDA decision. Paul Offit, Philly's most vocal vaccine advocate, on science, truth, and why he's not a fan of the latest COVID boosters (inquirer.com) (accessed 11/19/2022).

<sup>6</sup> This is a separate issue from the civil law realm where vaccine manufacturers enjoy broad products liability immunity.

<sup>7</sup> Regarding jurisdiction, that would be a matter for staff to research. In Utah, if an offense is committed outside our state, but one of the resulting elements occurs within our state, a state court could possibly have jurisdiction. Alaska's statute of limitations for reckless endangerment appears to be five years, which is longer than the other states I've looked at so far.
